

Neuropsychology Assessment

Overview

Thank you for your enquiry regarding neuropsychological support for your child.

A neuropsychological assessment is recommended when there are concerns about thinking skills such as memory, attention, processing speed, learning, executive skills (e.g., planning, organisation), behaviour or emotional wellbeing, particularly when these difficulties may relate to a known medical, neurological or developmental condition.

This type of assessment provides an in-depth understanding of your child's cognitive profile, how this links to day-to-day functioning at home and school, and what support may be most helpful.

It is suitable for children and young people with a history of:

- Acquired brain injury (e.g., TBI, concussion, hypoxic injury)
- Epilepsy or neurological conditions
- Developmental difficulties affecting learning and cognition
- Complex emotional, behavioural or functional presentations
- Medical conditions that may impact cognitive functioning

The assessment will help identify strengths, current needs, and tailored recommendations to support learning, wellbeing and rehabilitation.

What the Assessment Includes

A neuropsychology assessment typically involves:

- **Parent consultation** to explore current concerns and developmental history
- **Review of background information**, such as medical reports, school reports or assessments
- **Standardised cognitive assessment**, of areas such as verbal and visual reasoning, memory, processing speed, attention, executive functioning, academic skills
- **Assessment of emotional, social and behavioural needs** via interview and questionnaires
- **Integration and formulation** of cognitive and emotional/behavioural findings
- **A written report or summary letter** with tailored recommendations
- **Optional feedback session** to discuss results and next steps

Who Will Be Supporting Your Child

Your child will be supported by a HCPC-Registered Practitioner Psychologist with expertise in neuropsychological evaluation. All work is carried out under Dr Robinson's clinical oversight to ensure high-quality specialist neuropsychological interpretation and guidance.

Assessment Options

To support your child's needs, we offer three assessment pathways. All options include a consultation and review of background information but differ in the depth of assessment and documentation.

Option 1: Comprehensive Neuropsychology Assessment (£2,520)

Includes:

- Parent/child consultation
- Full standardised neuropsychological assessment
- Emotional/behavioural questionnaires
- Review of background information
- Comprehensive written report with recommendations
- Optional feedback session (remote + £200)

Best for:

Children with complex difficulties, medical/neurological histories, or where a full profile and in-depth formulation is required to guide education, rehabilitation or clinical care.

Option 2: Targeted Neuropsychology Assessment (£1,680)

Includes:

- Parent/child consultation
- Targeted cognitive assessment focusing on key areas of concern
- Brief emotional/behavioural screening
- Review of background information
- Summary report outlining key findings and recommendations
- Optional feedback session (remote + £200)

Best for:

Situations where specific questions need answering (e.g., "Does my child have working memory problems?" or "What learning needs should school prioritise?") without requiring a full report.

Option 3: Consultation Only (£390)

Includes:

- Parent consultation (remote)
- Clinical guidance on next steps and recommended support

Best for:

Families seeking professional advice to understand concerns and decide whether formal neuropsychological assessment is needed.

Next Steps

If you would like to proceed with an assessment, the following steps will need to be completed before an appointment can be arranged:

1. Signed Terms & Conditions

We will send you our T&Cs, which outline our service, confidentiality and cancellation policy. These must be signed and returned before any clinical work can begin.

2. Request for Support Form

You will receive a Request for Support Form to complete before the assessment (if not already completed). This gathers essential background information about your child and consent for us to contact school or other professionals where helpful.

3. Consent Forms

You will also receive psychological treatment and data-handling consent forms. These provide permission for us to conduct the assessment and outline how information is used, stored and shared in line with GDPR and professional standards.

4. Pre-payment for the Assessment

Payment for the chosen assessment option is required in advance to confirm the appointment slot. We do not accept direct payment from insurance providers, but are happy to provide receipts, invoices and any required documentation to support a claim for reimbursement.

5. Scheduling the Appointment

Consultations can be offered remotely or face-to-face, while formal neuropsychological assessment must be completed in person. Travel charges may apply if the clinician is required to travel more than one hour. We will discuss the most appropriate arrangement with you when scheduling.

6. Sharing Documents

Before the assessment, you will receive a secure upload link to safely share any relevant documents (e.g. school reports, previous assessments or medical letters) so these can be reviewed in advance.

If you have any questions or would like guidance on which assessment option is most suitable, please contact us – we are happy to help. We look forward to working with you and supporting your child.

Dr Sally Robinson
